

Postgraduate Nursing Courses Northland Region – 2018

HLTHSCI 700 Working with People Living with Long-Term Conditions 30 pts

Semester One

Long-term conditions present one of the most challenging global epidemics of the 21st century. This course is designed to support the development of a responsive person centred health care workforce to meet the needs of people living with long-term conditions and to work with them to improve their self-efficacy and health outcomes.

Course Coordinator: Mia Carroll | m.carroll@auckland.ac.nz

HLTHSCI 702 Population Health and Primary Healthcare 30 pts

Semester Two

Primary health care practitioners are challenged to deliver health care in new ways that better respond to consumers' health and social needs. This course explored individual and population health, equity, partnerships, empowerment and public policy. Primary healthcare interventions and broader strategies for action, informed by multiple sources of evidence are advocated.

HTLHSCI 701 Self-Management for People Living with Long-Term Conditions 30 pts

Semester Two

Self management and self management support are key strategies to maximise quality of life for individuals and their families living with long-term conditions. This course is designed to strengthen assessment of self management, collaborative person centred goal setting and planning. Focus is given to developing motivational communication skills and collaborative strengths-based approaches with support efficacy and activation.

Course Coordinator: Mia Carroll | m.carroll@auckland.ac.nz

NURSING 773 Advanced Assessment and Clinical Reasoning 30 pts

Semester Two

Nurses make a variety of diagnoses in their daily practice. Advanced nursing practice requires skilled health examination, consideration of differential diagnoses and evidence based diagnostic reasoning. This complex cognitive process is developed in relation to skills and knowledge required for sound clinical reasoning.

Contact: Deb Somerville | d.somerville@auckland.ac.nz

NURSING 742 Biological Science for Practice 30 pts

Online course every semester

Health care practice has become more complex due to changes in population demographics and increases in common chronic disease. Health professionals are increasingly required to practice in ways that identify and support patients at high risk for common diseases. A sound understanding of the pathology underpinning common chronic disease processes and evidence-based interventions is crucial to manage patients effectively. This course explores the associations between risk factors and underlying pathologies of common chronic diseases and commonly used pharmaceutical and lifestyle interventions in managing patients with these diseases.
