

# Meningococcal Disease causes Meningitis

Don't wait – take action

Even if you think the person has been immunised.

- Meningococcal disease is fast and can kill or cause serious disability.
- Get help **immediately** if you see one or more of the symptoms below.
- These meningococcal disease symptoms may not all show at once.

## Symptoms in babies

High fever (may also have cool hands and feet or shivering)

Sleepy or floppy or harder to wake

Unusual crying

Stiff neck

Dislike bright lights

Vomiting

Refusal to feed

Sometimes, red or purple spots or bruises on the skin

## Symptoms in older children and adults

High fever and headache

Confusion and sleepiness

Joint pain and aching muscles

Stiff neck

Dislike bright lights

Vomiting

Sometimes, red or purple spots or bruises on the skin

Not everyone with meningococcal disease gets spots. Don't wait for spots to appear before getting medical help.
